XM Radio offers me and my family quality programs and stations I can't receive over the public airwaves and it does it without commercials. I get local traffic and weather faster and without interference and without commercials. Another important factor to consider is that I pay a subscription fee for this service and I don't feel that these services should be taken away. If others want to listen to public "free" radio, that is their choice and they can sit through the noise and the commercials, but I pay for this quality service and you should leave it exactly as it is.
